Section 255-18 C. Definitions, at DOUBLE CHECK VALVE, ASSEMBLY, ACCEPTABLE, is hereby AMENDED after the DEGREE OF HAZARD definition in the Code, to read as follows:

DOUBLE CHECK VALVE, ASSEMBLY, ACCEPTABLE- An assembly that is composed of two single, independently acting check valves, including tightly closing shutoff valves located at each end of the assembly and suitable connections for testing the watertightness of each check valve. A potable water expansion tank is required on the cold-water supply line to the hot water tank. Structures containing multiple hot water tanks will require an expansion tank for each hot water tank OR an expansion tank large enough to accommodate the total gallons for all hot water tanks in the structure.

EXPANSION TANK- A potable water expansion tank is a thermal expansion absorber designed to relieve the internal pressure resulting from the installation of the dual check valve assembly located on the incoming water service line supplying the structure.

and Section D. Requirements (4) is hereby AMENDED to read as follows:

(4) An acceptable backflow prevention device and potable expansion tank shall be installed on each service line to a customer's water system at or near the property line or immediately inside the building being serviced, but in all cases before the first branch line leading off the service line, as follows:

(a) Whenever a customer's water system is rated hazardous, an acceptable reduced pressure zone device or air gap and potable expansion tank shall be installed.

(b) Whenever a customer's water system is rated aesthetically objectionable, as a minimum an acceptable double check valve assembly and potable expansion tank shall be installed.
